Reading Comprehension

- **Read the following passage carefully, then answer the questions below:**

Have you heard about an animal called a leopard? These big cats have light- colored fur that is covered in dark spots. They are known for being the strongest of the big cats. Sometimes they are **mixed up** with cheetah, but they are not the same!

Leopards can be found in many parts of the world like India, China and Africa. Their dark spots help them blend with their surroundings. This is good because leopards are hunters. Their spots help them hide while hunting. It hunts weaker animals in order to have food. It will even hunt for fish and crabs in the water because unlike most cats, leopards love the water.

Leopards are night animals. This mean they prefer to sleep during the day and move around all night. They have amazing eyesight and can see much better in the dark than humans. While most leopards have light fur with dark spots, there is a different type called the black leopard. It has dark fur with dark spots. It can be hard to see the spots because **they** blend into the rest of the fur. Unfortunately, the leopard population has been going down in recent years. This means there are fewer leopards being born. This is especially true in the countries outside of Africa.
