

Student's Name :**Grade / Section :**

Read the following text then choose the correct answer :

A-Space exploration is important for many reasons. It helps us learn more about our universe and the world we live in. It also brings people together and creates new jobs.

B-One reason space exploration is important is that it helps us understand our planet better. For example, satellites help us predict the weather. They also help us find out where natural disasters like earthquakes and hurricanes will happen. Satellites can even track animals to see how they move and where they go. This information is very useful for scientists studying the environment.

C-Another reason space exploration is important is that it brings people from different countries together. In 1975, an American spaceship called Apollo docked with a Russian spaceship called Soyuz. The astronauts shook hands in space. This was an important moment in history. It showed that two countries could work together in space, even if they were not friends on Earth. Today, many countries work together in the International Space Station. Scientists from all over the world take turns living there. They do experiments and learn from each other. Working together in space builds trust and friendship between countries.

D-Finally, space exploration creates new jobs and businesses. When NASA landed the first man on the moon in 1969, millions of people watched on TV. This inspired many young people to become scientists and engineers. Today, there are thousands of people working in the space industry. They design rockets and spaceships, build satellites, and study the stars. The space industry also creates new technologies that help us in everyday life. For example, NASA invented memory foam for astronauts' seats. Today, we use memory foam in our beds and pillows.

E-In conclusion, space exploration is important because it helps us learn more about our planet and our universe. It also brings people together and creates new jobs. That's why we should continue exploring space in the future.

1- The text is mainly about :

- a- Importance of exploring space
- b- Importance of polar areas
- c- Importance of school

2- Paragraph B talks about :

- a- Understanding other planets with the help of exploration
- b- Ways of travel
- c- Modern technology

3- What is one reason space exploration is important according to the text?

- a- It helps us predict the weather.
- b- It allows us to communicate with aliens.

- c- It helps us find new sources of energy.
- 4- In what year did an American spaceship dock with a Russian spaceship?**
 - a- 1969
 - b- 1975
 - c- 1983
- 5- What did the astronauts do when they shook hands in space?**
 - a-They exchanged gifts.
 - b-They took a selfie.
 - c-They showed friendship between countries.
- 6- What inspired many young people to become scientists and engineers?**
 - a- Watching the first moon landing on TV.
 - b- Reading a book about space exploration.
 - c- Meeting an astronaut in person.
- 7- What is one technology that was invented for space exploration and is now used in everyday life?**
 - a- Memory foam
 - b- Virtual reality
 - c- Self-driving cars

.....
 Look at the picture and answer the questions :

- 1- In your opinion , how can camels live in the hot desert ?

.....

- 2- What would happen if there was no exploration to space ?

.....

3- Do you think eating customs are the same in all countries ? how ?

.....

.....

4- Can a boy bike the world ? why ? why not ?

.....

.....
