Plants

Plant parts:

Roots:

1. keep plants in the ground.
2. Take in water from the soil.
3. Take in minerals and nutrients.

minerals and nutrients help to keep living things healthy.

Stem:

1-Water and nutrients travel through the roots and up to the stem.
2-Holds up the plant.

Leaves: take in air and sunlight to **make food.**

Plants in area with little sunlight have **large leaves** to take more sunlight.

- The parts of cactus plant help it to live in dry desert.
- Cactus has a thick stem that stores water.
- The stem acts like a leaf to produce food.
- Its waxy covering helps hold water.
