Proportions and Similarity

: Then

GHAPTER

You learned about ratios and proportions and applied them to real-world applications.

Now

 Identify similar polygons and use ratios and proportions to solve problems.

In this chapter, you will:

- Identify and apply similarity transformations
- Use scale models and drawings to solve problems.

: Why?

• **SPORTS** Similar triangles can be used in sports to describe the path of a ball, such as a bounce pass from one person to another.

Textbook Option Take the Quick Check below. Refer to the Quick Review for help.

QuickCheck	QuickReview				
Solve each equation. 1. $\frac{3x}{8} = \frac{6}{x}$ 3. $\frac{x+9}{2} = \frac{3x-1}{8}$ 5. EDUCATION The student to teacher ratio at a secondary school is 17 to 1. If there are 1088 students in the school, how many teachers are there?	Example 1 Solve $\frac{4x-3}{5} = \frac{2x+11}{3}$. $\frac{4x-3}{5} = \frac{2x+11}{3}$ 3(4x-3) = 5(2x+11) 12x-9 = 10x+55 2x = 64 x = 32	Original equation Cross multiplication Distributive Property Add. Simplify.			
ALGEBRA In the figure, \overrightarrow{BA} and \overrightarrow{BC} are opposite rays and \overrightarrow{BD} bisects $\angle ABF$.	Example 2 In the figure, \overrightarrow{OP} and \overrightarrow{OR} $\angle SQR$. If $m \angle SQR = 6x + m \angle SQT$.	are opposite rays, and \overrightarrow{QT} bisects - 8 and $m \angle TQR = 4x - 14$, find $S = \frac{T}{Q} = \frac{T}{R}$			

- **6.** If $m \angle ABF = 3x 8$ and $m \angle ABD = x + 14$, find $m \angle ABD$.
- 7. If $m \angle FBC = 2x + 25$ and $m \angle ABF = 10x 1$, find $m \angle DBF$.
- **8.** LANDSCAPING A landscape architect is planning to add sidewalks around a fountain as shown below. If \overrightarrow{BA} and \overrightarrow{BC} are opposite rays and \overrightarrow{BD} bisects $\angle ABF$, find $m \angle FBC$.

Since \overrightarrow{TQ} bisects $\angle SQR$, $m \angle SQR = 2(m \angle TQR)$.

 $m \angle SQR = 2(m \angle TQR)$ Def. of \angle bisector6x + 8 = 2(4x - 14)Substitution6x + 8 = 8x - 28Distributive Property-2x = -36Subtract.x = 18Simplify.

Since \overrightarrow{TQ} bisects $\angle SQR$, $m \angle SQT = m \angle TQR$. $m \angle SQT = m \angle TQR$ Def. of \angle bisector $m \angle SQT = 4x - 14$ Substitution $m \angle SQT = 58$ x = 18

Get Started on the Chapter

You will learn several new concepts, skills, and vocabulary terms as you study Chapter 6. To get ready, identify important terms and organize your resources.

Ratios and Proportions

ratio of the first and last quantities is *a*:*c*.

Example 2 Use Extended Ratios

The ratio of the measures of the angles in a triangle is 3:4:5. Find the measures of the angles.

Just as the ratio $\frac{3}{4}$ or 3:4 is equivalent to $\frac{3x}{4x}$ or 3x:4x, the extended ratio 3:4:5 can be written as 3x:4x:5x.

Sketch and label the angle measures of the triangle. Then write and solve an equation to find the value of *x*.

3x + 4x + 5x = 180 Triangle Sum Theorem

12x = 180 Combine like terms.

x = 15 Divide each side by 12.

 $3x^{\circ}$ $5x^{\circ}$ $4x^{\circ}$

So the measures of the angles are 3(15) or 45, 4(15) or 60, and 5(15) or 75.

CHECK The sum of the angle measures should be 180.

45 + 60 + 75 = 180 V

GuidedPractice

2. In a triangle, the ratio of the measures of the sides is 2:2:3 and the perimeter is 392 centimeters. Find the length of the longest side of the triangle.

ReadingMath

Proportion When a proportion is written using colons, it is read using the word *to* for the colon. For example, 2:3 is read *2 to 3*. The means are the inside numbers, and the extremes are the outside numbers.

Use Properties of Proportions An equation stating that two ratios are equal is called a **proportion**. In the proportion $\frac{a}{b} = \frac{c}{d}$, the numbers *a* and *d* are called the **extremes** of the proportion, while the numbers *b* and *c* are called the **means** of the proportion.

extreme $\rightarrow \frac{a}{b} = \frac{c}{d} \leftarrow \frac{c}{c}$ mean

The product of the extremes *ad* and the product of the means *bc* are called **cross products**.

KeyConcept	Cross Products Property
Reyconcept	closs rioducts rioperty
Words	In a proportion, the product of the extremes equals the product of the means.
Symbols	If $\frac{a}{b} = \frac{c}{d}$ when $b \neq 0$ and $d \neq 0$, then $ad = bc$.
Example	If $\frac{4}{10} = \frac{6}{15}$, then $4 \cdot 15 = 10 \cdot 6$.

You will prove the Cross Products Property in Exercise 41.

The converse of the Cross Products Property is also true. If ad = bc and $b \neq 0$ and $d \neq 0$, then $\frac{a}{b} = \frac{c}{d}$. That is, $\frac{a}{b}$ and $\frac{c}{d}$ form a proportion. You can use the Cross Products Property to solve a proportion.

Example 3 Use Cross Products to Solve Proportions

StudyTip

Perseverance Example 3b could also be solved by multiplying each side of the equation by 10, the least common denominator. $10\left(\frac{x+3}{2}\right) = \frac{4x}{5}(10)$ 5(x+3) = 2(4x)5x + 15 = 8x15 = 3x5 = x

Solve each proportion.			
a. $\frac{6}{x} = \frac{21}{31.5}$		b. $\frac{x+3}{2} = \frac{4x}{5}$	
$\frac{6}{x} = \frac{21}{31.5}$	Original proportion	$\frac{x+3}{2} = \frac{4x}{5}$	
6(31.5) = x(21)	Cross Products Property	(x+3)5=2(4x)	
189 = 21x	Simplify.	5x + 15 = 8x	
9 = x	Solve for <i>x</i> .	15 = 3x	
		$\mathbf{H}_{\mathbf{O}} 5 = x$	
GuidedPractice			
3A. $\frac{x}{4} = \frac{11}{-6}$	3B. $\frac{-4}{7} = \frac{-4}{2y}$	6 + 5 3C .	$\frac{7}{z-1} = \frac{9}{z+4}$

Proportions can be used to make predictions.

Real-WorldLink

The percent of driving-age teens (ages 15 to 20) with their own vehicles nearly doubled nationwide from 22 percent in 1985 to 42 percent in 2003. **Source:** CNW Marketing Research

Real-World Example 4 Use Proportions to Make Predictions

CAR OWNERSHIP Ahmed conducted a survey of 50 students driving to school and found that 28 owned cars. If 755 students drive to his school, predict the total number of students who own cars.

Write and solve a proportion that compares the number of students who own cars to the number who drive to school.

$\frac{28}{50} = \frac{x}{755}$	 students owning cars students driving to school
$28 \cdot 755 = 50 \cdot x$	Cross Products Property
21,140 = 50x	Simplify.
422.8 = x	Divide each side by 50.

Based on Ahmed's survey, about 423 students at his school own cars.

GuidedPractice

4. BIOLOGY In an experiment, students netted butterflies, recorded the number with tags on their wings, and then released them. The students netted 48 butterflies and 3 of those had tagged wings. Predict the number of butterflies that would have tagged wings out of 100 netted.

ionammed Bin Kasnid

The proportion shown in Example 4 is not the only correct proportion for that situation. Equivalent forms of a proportion all have identical cross products.

KeyConcept Equivalent Proportions				
Symbols	The following proportions are equivalent.			
	$\frac{a}{b} = \frac{c}{d}, \frac{b}{a} = \frac{d}{c}, \frac{a}{c} = \frac{b}{d}, \frac{c}{a} = \frac{d}{b}$			
Examples	$\frac{28}{50} = \frac{x}{755}, \frac{50}{28} = \frac{755}{x}, \frac{28}{x} = \frac{50}{755}, \frac{x}{28} = \frac{755}{50}.$

108 muffins. How many eggs will she need?

Practice and Problem Solving

Example 1 MOVIES For Exercises 10 and 11, refer to the graphic below.

- **10.** Of the films listed, which had the greatest ratio of Academy Awards to number of nominations?
- 11. Which film listed had the lowest ratio of awards to nominations?
- Example 2 12. GAMES A video game store has 60 games to choose from, including 40 sports games. What is the ratio of sports games to video games?
 - **13** The ratio of the measures of the three sides of a triangle is 9 : 7 : 5. Its perimeter is 191.1 inches. Find the measure of each side.
 - **14.** The ratio of the measures of the three sides of a triangle is 3:7:5, and its perimeter is 156.8 meters. Find the measure of each side.
 - **15.** The ratio of the measures of the three sides of a triangle is $\frac{1}{4}:\frac{1}{8}:\frac{1}{6}$. Its perimeter is 4.75 feet. Find the length of the longest side.
 - **16.** The ratio of the measures of the three sides of a triangle is $\frac{1}{4}:\frac{1}{3}:\frac{1}{6}$, and its perimeter is 31.5 centimeters. Find the length of the shortest side.

Find the measures of the angles of each triangle.

- **17.** The ratio of the measures of the three angles is 3:6:1.
- **18.** The ratio of the measures of the three angles is 7:5:8.
- **19.** The ratio of the measures of the three angles is 10:8:6.
- **20.** The ratio of the measures of the three angles is 5:4:7.

Example 3 Solve each proportion.

21.	$\frac{5}{8} = \frac{y}{3}$	22.	$\frac{w}{6.4} = \frac{1}{2}$	23.	$\frac{4x}{24} = \frac{56}{112}$	24.	$\frac{11}{20} = \frac{55}{20x}$
25.	$\frac{2x+5}{10} = \frac{42}{20}$	26.	$\frac{a+2}{a-2} = \frac{3}{2}$	27.	$\frac{3x-1}{4} = \frac{2x+4}{5}$	28.	$\frac{3x-6}{2} = \frac{4x-2}{4}$

Example 4

29 NUTRITION According to a recent study, 7 out of every 500 people aged 13 to 17 years are vegetarian. In a group of 350 13- to 17-year-olds, about how many would you expect to be vegetarian?

30. CURRENCY Your family is traveling to Mexico on vacation. You have saved AED 500 to use for spending money. If 269 Mexican pesos is equivalent to AED 91.80, how many pesos will you get when you exchange your AED 500?

ALGEBRA Solve each proportion. Round to the nearest tenth.

24	2x + 3	6	22 $x^2 + 4x + 4 - x + 2$	22	9x + 6	_ 20 <i>x</i>	+ 4
51.	3	$\frac{1}{x-1}$	32. $40 - 10$	55.	18	3	3x

- **34.** The perimeter of a rectangle is 98 feet. The ratio of its length to its width is 5:2. Find the area of the rectangle.
- **35.** The perimeter of a rectangle is 220 inches. The ratio of its length to its width is 7:3. Find the area of the rectangle.
- **36.** The ratio of the measures of the side lengths of a quadrilateral is 2:3:5:4. Its perimeter is 154 meters. Find the length of the shortest side.
- **37.** The ratio of the measures of the angles of a quadrilateral is 2:4:6:3. Find the measures of the angles of the quadrilateral.
- **38. SUMMER JOBS** In June of 2000, 60.2% of American teens 16 to 19 years old had summer jobs. By June of 2006, 51.6% of teens in that age group were a part of the summer work force.
 - **a.** Has the number of 16- to 19-year-olds with summer jobs increased or decreased since 2000? Explain your reasoning.
 - **b.** In June 2006, how many 16- to 19-year-olds would you expect to have jobs out of 700 in that age group? Explain your reasoning.
- **39. MODELING** In a golden rectangle, the ratio of the length to the width is about 1.618. This is known as the *golden ratio*.
 - **a.** Recall from page 461 that a standard television screen has an aspect ratio of 4:3, while a high-definition television screen has an aspect ratio of 16:9. Is either type of screen a golden rectangle? Explain.
 - **b.** The golden ratio can also be used to determine column layouts for Web pages. Consider a site with two columns, the left for content and the right as a sidebar. The ratio of the left to right column widths is the golden ratio. Determine the width of each column if the page is 960 pixels wide.
- **40. SCHOOL ACTIVITIES** A survey of club involvement showed that, of the 36 students surveyed, the ratio of French Club members to Spanish Club members to Drama Club members was 2:3:7. How many of those surveyed participate in Spanish Club? Assume that each student is active in only one club.

- **41. PROOF** Write an algebraic proof of the Cross Products Property.
- **42. SPORTS** Hessa jogs the same path every day in the winter to stay in shape for track season. She runs at a constant rate, and she spends a total of 39 minutes jogging. If the ratio of the times of the four legs of the jog is 3:5:1:4, how long does the second leg of the jog take her?

13 J MULTIPLE REPRESENTATIONS In this problem, you will explore proportional relationships in triangles.

- **a. Geometric** Draw an isosceles triangle *ABC*. Measure and label the legs and the vertex angle. Draw a second triangle *MNO* with a congruent vertex angle and legs twice as long as *ABC*. Draw a third triangle *PQR* with a congruent vertex angle and legs half as long as *ABC*.
- b. Tabular Copy and complete the table below using the appropriate measures.

	Triangle	ABC	MNO	PQR
3)	Leg length			
<i>y</i>	Perimeter			

c. Verbal Make a conjecture about the change in the perimeter of an isosceles triangle if the vertex angle is held constant and the leg length is increased or decreased by a factor.

H.O.T. Problems Use Higher-Order Thinking Skills

44. ERROR ANALYSIS Amal and Amani have solved the proportion $\frac{x-3}{4} = \frac{1}{2}$. Is either of them correct? Explain your reasoning.

- **45. CHALLENGE** The dimensions of a rectangle are y and $y^2 + 1$ and the perimeter of the rectangle is 14 units. Find the ratio of the longer side of the rectangle to the shorter side of the rectangle.
- **46. REASONING** The ratio of the lengths of the diagonals of a quadrilateral is 1:1. The ratio of the lengths of the consecutive sides of the quadrilateral is 3:4:3:5. Classify the quadrilateral. Explain.
- **47.** WHICH ONE DOESN'T BELONG? Identify the proportion that does not belong with the other three. Explain your reasoning.

- **48. OPEN ENDED** Write four ratios that are equivalent to the ratio 2:5. Explain why all of the ratios are equivalent.
- **49. WRITING IN MATH** Compare and contrast a ratio and a proportion. Explain how you use both to solve a problem.

Write a paragraph proof.

65. Given: $\triangle ABC \cong \triangle DEF$; $\triangle DEF \cong \triangle GHI$ **Prove:** $\triangle ABC \cong \triangle GHI$

Graphing Technology Lab Fibonacci Sequence and Ratios

Leonardo Pisano (c. 1170–c. 1250), or Fibonacci, was born in Italy but educated in North Africa. As a result, his work is similar to that of other North African authors of that time. His book *Liber abaci*, published in 1202, introduced what is now called the Fibonacci sequence, in which each term after the first two terms is the sum of the two numbers before it.

					100		() () () () () () () () () ()
Term	1	2	3	4	5	6	
Fibonacci Number	1	1	2	3	0 5	8	13
		R		1 1+2	12↑ 2+3	↑ 3+5	1 5+8

Activity

You can use special applications on some graphing calculators to calculate terms of the Fibonacci sequence. Then compare each term with its preceding term.

- Step 1Access the CellSheet application by pressing the APPS key.Choose the number for CellSheet and press ENTER.
- **Step 2** Enter the column headings in row 1. Use the **ALPHA** key to enter letters and press ["] at the beginning of each label.
- Step 3Enter 1 into cell A2. Then insert the formula =A2+1 in cell A3.Press STO to insert the = in the formula. Then use F3 to copy
this formula and use F4 to paste it in each cell in the column.
This will automatically calculate the number of the term.
- Step 4 In column B, we will record the Fibonacci numbers. Enter 1 in cells B2 and B3 since you do not have two previous terms to add. Then insert the formula =B2+B3 in cell B4. Copy this formula down the column.
- Step 5 In column C, we will find the ratio of each term to its preceding term. Enter 1 in cell C2 since there is no preceding term. Then enter B3/B2 in cell C3. Copy this formula down the column. *The screens show the results for terms 1 through 11.*

Mohammed Bin Rashid Smart Learning Program

Analyze the Results

- 1. What happens to the Fibonacci number as the number of the term increases?
- 2. What pattern of odd and even numbers do you notice in the Fibonacci sequence?
- **3.** As the number of terms gets greater, what pattern do you notice in the ratio column?
- **4.** Extend the spreadsheet to calculate fifty terms of the Fibonacci sequence. Describe any differences in the patterns you described in Exercises 1–3.
- **5.** MAKE A CONJECTURE How might the Fibonacci sequence relate to the golden ratio?

Similar Polygons

similar polygons scale factor

Mathematical Practices

Look for and make use of structure. Construct viable arguments and critique the reasoning of others.

the same size.

KeyConcept Similar Polygons

Two polygons are similar if and only if their corresponding angles are congruent and corresponding side lengths are proportional.

Example In the diagram below, *ABCD* is similar to *WXYZ*.

As with congruence statements, the order of vertices in a similarity statement like ABCD ~ WXYZ is important. It identifies the corresponding angles and sides.

Example 1 Use a Similarity Statement

If $\triangle FGH \sim \triangle JKL$, list all pairs of congruent angles, and write a proportion that relates the corresponding sides.

Use the similarity statement.

R

T

Κ

0

GuidedPractice

1. In the diagram, *NPQR* ~ *UVST*. List all pairs of congruent angles, and write a proportion that relates the corresponding sides.

11

StudyTip

ReadingMath Similarity Symbol The

not similar to.

symbol ≁ is read as is

Similarity Ratio The scale factor between two similar polygons is sometimes called the *similarity ratio*. The ratio of the lengths of the corresponding sides of two similar polygons is called the **scale factor**. The scale factor depends on the order of comparison.

In the diagram, $\triangle ABC \sim \triangle XYZ$.

The scale factor of $\triangle ABC$ to $\triangle XYZ$ is $\frac{6}{3}$ or 2.

The scale factor of $\triangle XYZ$ to $\triangle ABC$ is $\frac{3}{6}$ or $\frac{1}{2}$.

Real-World Example 2 Identify Similar Polygons **PHOTO EDITING** Hamdah wants to use the rectangular photo shown as the background for her computer's desktop, but she needs to resize it. Determine 8 in. whether the following rectangular images are similar. If so, write the similarity statement and scale factor. Explain your reasoning. D 10 in. С Κ b. a. 🗲 12 in. 12 in. M 15 in. 14 in. G

a. Step 1 Com

Step 2

Compare corresponding angles.

Since all angles of a rectangle are right angles and right angles are congruent, corresponding angles are congruent.

Compare corresponding sides.

DC _	10	5	BC	8	2	5 _ 2
HG [–]	14 or	7	FG	$-\frac{12}{12}$	$\frac{3}{3}$	$\overline{7} \neq \overline{3}$

Since corresponding sides are not proportional, *ABCD* \neq *EFGH*. So the photos are not similar.

b. Step 1 Since *ABCD* and *JKLM* are both rectangles, corresponding angles are congruent.

Step 2 Compare corresponding sides. $\frac{DC}{ML} = \frac{10}{15} \text{ or } \frac{2}{3}$

correspondin	ig sides.	
2	BC 8 2	2 2
$\frac{1}{3}$	$\overline{KL} = \overline{12}$ or $\overline{3}$	$\frac{1}{3} = \frac{1}{3}$

Since corresponding sides are proportional, *ABCD* ~ *JKLM*. So the rectangles are similar with a scale factor of $\frac{2}{3}$.

GuidedPractice

2. Determine whether the triangles shown are similar. If so, write the similarity statement and scale factor. Explain your reasoning.

Copyright © McGraw-Hill Education Image Source

StudyTip

Similarity and Congruence If two polygons are congruent, they are also similar. All of the corresponding angles are congruent, and the lengths of the corresponding sides have a ratio of 1:1. **Use Similar Figures** You can use scale factors and proportions to solve problems involving similar figures.

StudyTip

Identifying Similar Triangles When only two congruent angles of a triangle are given, remember that you can use the Third Angles Theorem to establish that the remaining corresponding angles are also congruent.

In similar polygons, the ratio of any two corresponding lengths is proportional to the scale factor between them. This leads to the following theorem about the perimeters of two similar polygons.

Example 4 Use a Scale Factor to Find Perimeter

Practice and Problem Solving

Example 1 List all pairs of congruent angles, and write a proportion that relates the corresponding sides for each pair of similar polygons.

16. GAMES The dimensions of a hockey rink are 61 meters by 26 meters. Are the hockey rink and the air hockey table shown similar? Explain your reasoning.

17. COMPUTERS The dimensions of a 43.2-centimeter flat panel computer screen are approximately 33.7 by 27.3 centimeters. The dimensions of a 48.3-centimeter flat panel computer screen are approximately 36.8 by 30.5 centimeters. To the nearest tenth, are the computer screens similar? Explain your reasoning.

Example 3 REGULARITY Each pair of polygons is similar. Find the value of *x*.

Example 422. Rectangle *ABCD* has a width of 8 meters and a length of 20 meters. Rectangle *QRST*, which is similar to rectangle *ABCD*, has a length of 40 meters. Find the scale factor of rectangle *ABCD* to rectangle *QRST* and the perimeter of each rectangle.

Find the perimeter of the given triangle.

- **27.** Two similar rectangles have a scale factor of 2:4. The perimeter of the large rectangle is 80 meters. Find the perimeter of the small rectangle.
- **28.** Two similar rectangles have a scale factor of 3:2. The perimeter of the small rectangle is 50 meters. Find the perimeter of the large rectangle.

List all pairs of congruent angles, and write a proportion that relates the corresponding sides.

37. SLIDE SHOW You are using a digital projector for a slide show. The photos are 13 inches by $9\frac{1}{4}$ inches on the computer screen, and the scale factor of the computer image to the projected image is 1:4. What are the dimensions of the projected image?

COORDINATE GEOMETRY For the given vertices, determine whether rectangle *ABCD* is similar to rectangle *WXYZ*. Justify your answer.

- **38.** *A*(-1, 5), *B*(7, 5), *C*(7, -1), *D*(-1, -1); *W*(-2, 10), *X*(14, 10), *Y*(14, -2), *Z*(-2, -2)
- **39.** *A*(5, 5), *B*(0, 0), *C*(5, -5), *D*(10, 0); *W*(1, 6), *X*(-3, 2), *Y*(2, -3), *Z*(6, 1)

ARGUMENTS Determine whether the polygons are *always*, *sometimes*, or *never* similar. Explain your reasoning.

- **40.** two obtuse triangles **41.** a trapezoid and a parallelogram
- **42.** two right triangles **43.** two isosceles triangles
- **44.** a scalene triangle and an isosceles triangle
- **45.** two equilateral triangles

46. PROOF Write a paragraph proof of Theorem 6.1.

Given: $\triangle ABC \sim \triangle DEF$ and $\frac{AB}{DE} = \frac{m}{n}$ **Prove:** $\frac{\text{perimeter of } \triangle ABC}{\text{perimeter of } \triangle DEF} = \frac{m}{n}$

PHOTOS You are enlarging the photo shown at the right for your school yearbook. If the dimensions of the original photo are $2\frac{1}{3}$ inches by $1\frac{2}{3}$ inches and the scale factor of the old photo to the new photo is 2:3, what are the dimensions of the new photo?

- **48.** CHANGING DIMENSIONS Rectangle *QRST* is similar to rectangle *JKLM* with sides in a ratio of 4:1.
 - **a.** What is the ratio of the areas of the two rectangles?
 - **b.** Suppose the dimension of each rectangle is tripled. What is the new ratio of the sides of the rectangles?
 - **c.** What is the ratio of the areas of these larger rectangles?
- **49.** CHANGING DIMENSIONS In the figure shown, $\triangle FGH \sim \triangle XYZ$.
 - **a.** Show that the perimeters of $\triangle FGH$ and $\triangle XYZ$ have the same ratio as their corresponding sides.
 - **b.** If 6 units are added to the lengths of each side, are the new triangles similar? Explain.

- **50. 50.**

You can use the AA Similarity Postulate to prove the following two theorems.

StudyTip

Corresponding Sides To determine which sides of two triangles correspond, begin by comparing the longest sides, then the next longest sides, and finish by comparing the shortest sides.

Example 2 Use the SSS and SAS Similarity Theorems

Determine whether the triangles are similar. If so, write a similarity statement. Explain your reasoning.

StudyTip

Draw Diagrams It is helpful to redraw similar triangles so that the corresponding side lengths have the same orientation.

You can decide what is sufficient to prove that two triangles are similar.

Standardized Test Example 3 Sufficient Conditions

Read the Test Item

You are given that $\angle ADB$ is a right angle and asked to identify which additional information would not be enough to prove that $\triangle ADB \sim \triangle CDB$.

Solve the Test Item

Since $\angle ADB$ is a right angle, $\angle CDB$ is also a right angle. Since all right angles are congruent, $\angle ADB \cong \angle CDB$. Check each answer choice until you find one that does not supply a sufficient additional condition to prove that $\triangle ADB \sim \triangle CDB$.

Choice A: If
$$\frac{AD}{BD} = \frac{BD}{CD}$$
 and $\angle ADB \cong \angle CDB$, then $\triangle ADB \sim \triangle CDB$ by SAS Similarity.

Choice B: If
$$\frac{AB}{BC} = \frac{BD}{CD}$$
 and $\angle ADB \cong \angle CDB$, then we cannot conclude that $\triangle ADB \sim \triangle CDB$ because the included angle of side \overline{AB} and \overline{BD} is not $\angle ADB$. So the answer is B.

Test-TakingTip Identifying Nonexamples

Sometimes test questions require you to find a nonexample, as in this case. You must check each option until you find a valid nonexample. If you would like to check your answer, confirm that each additional option is correct.

GuidedPractice

3. If $\triangle JKL$ and $\triangle FGH$ are two triangles such that $\angle J \cong \angle F$, which of the following would be sufficient to prove that the triangles are similar?

$$\mathbf{F} \quad \frac{KL}{GH} = \frac{JL}{FH} \qquad \mathbf{G} \quad \frac{JL}{JK} = \frac{FH}{FG} \qquad \mathbf{H} \quad \frac{JK}{FG} = \frac{KL}{GH} \qquad \mathbf{J} \quad \frac{JL}{JK} = \frac{GH}{FG}$$

2 Use Similar Triangles Like the congruence of triangles, similarity of triangles is reflexive, symmetric, and transitive.

Theorem 6.4 Properties of Sin	nilarity
Reflexive Property of Similarity	$\triangle ABC \sim \triangle ABC$
Symmetric Property of Similarity	If $\triangle ABC \sim \triangle DEF$, then $\triangle DEF \sim \triangle ABC$.
Transitive Property of Similarity	If $\triangle ABC \sim \triangle DEF$, and $\triangle DEF \sim \triangle XYZ$, then $\triangle ABC \sim \triangle XYZ$.

You will prove Theorem 6.4 in Exercise 26.

Example 4 Parts of Similar Triangles

Find *BE* and *AD*.

Since $\overline{BE} \parallel \overline{CD}$, $\angle ABE \cong \angle BCD$, and $\angle AEB \cong \angle EDC$ because they are corresponding angles. By AA Similarity, $\triangle ABE \sim \triangle ACD$.

StudyTip Proportions An additional proportion that is true for Example 4 is $\frac{AC}{CD} = \frac{AB}{BE}$.

Real-World Example 5 Indirect Measurement

ROLLER COASTERS Fatima is estimating the height of a large roller coaster. She is 5 feet 3 inches tall and her shadow is 3 feet long. If the length of the shadow of the roller coaster is 40 feet, how tall is the roller coaster?

Understand Make a sketch of the situation. 5 feet 3 inches is equivalent to 5.25 feet.

Plan In shadow problems, you can assume that the angles formed by the Sun's rays with any two objects are congruent and that the two objects form the sides of two right triangles.

Since two pairs of angles are congruent, the right triangles are similar by the AA Similarity Postulate. So, the following proportion can be written.

Fatima's height		Fatima's shadow length	
coaster's height	Ţ.	coaster's shadow length	

Solve Substitute the known values and let x = roller coaster's height.

$\frac{5.25}{x} = \frac{3}{40}$	Substitution
$3 \cdot x = 40(5.25)$	Cross Products Property
3x = 210	Simplify.
x = 70	Divide each side by 3.

The roller coaster is 70 feet tall.

Check The roller coaster's shadow length is $\frac{40 \text{ ft}}{3 \text{ ft}}$ or about 13.3 times Fatima's shadow length. Check to see that the roller coaster's height is about 13.3 times Fatima's height. $\frac{70 \text{ ft}}{5.25 \text{ ft}} \approx 13.3 \checkmark$

GuidedPractice

5. BUILDINGS Jassim is standing next to a building. He is 6 feet tall and the length of his shadow is 9 feet. If the length of the shadow of the building is 322.5 feet, how tall is the building?

Problem-SolvingTip

Reasonable Answers When you have solved a problem, check your answer for reasonableness. In this example, Rana's shadow is a little more than half her height. The coaster's shadow is also a little more than half of the height you calculated. Therefore, the answer is reasonable.

Check Your Understanding

Example 4 STRUCTURE Identify the similar triangles. Find each measure.

Example 58. COMMUNICATION A cell phone tower casts a 100-foot shadow. At the same time, a 4-foot 6-inch post near the tower casts a shadow of 3 feet 4 inches. Find the height of the tower.

Spiral Review

List all pairs of congruent angles, and write a proportion that relates the corresponding sides for each pair of similar polygons. (Lesson 6-2)

Skills Review

Write a two-column proof.

57. Given: $r \parallel t; \angle 5 \cong \angle 6$ Prove: $\ell \parallel m$

Geometry Lab Proofs of Perpendicular and Parallel Lines

Activity 1 Perpendicular Lines

Given: Slope of $\overrightarrow{AC} = m_1$, slope of $\overrightarrow{CE} = m_2$, and $\overrightarrow{AC} \perp \overrightarrow{CE}$. Prove: $m_1m_2 = -1$

Step 1 On a coordinate plane, construct $\overrightarrow{AC} \perp \overrightarrow{CE}$ and transversal \overrightarrow{BD} parallel to the *x*-axis through *C*. Then construct right $\triangle ABC$ such that \overrightarrow{AC} is the hypotenuse and right $\triangle EDC$ such that \overrightarrow{CE} is the hypotenuse. The legs of both triangles should be parallel to the *x*-and *y*-axes, as shown.

Step 2 Find the slopes of \overrightarrow{AC} and \overrightarrow{CE} .

Slope of \overrightarrow{AC}		Slope of \overleftarrow{CE}		
$m_1 = \frac{\text{rise}}{\text{run}}$	Slope Formula	$m_2 = \frac{\text{rise}}{\text{run}}$	Slope Formula	
$=\frac{-AB}{BC}$ or $-\frac{AB}{BC}$	rise = $-AB$, run = BC	$=\frac{DE}{CD}$	rise = DE, run = CL	

Step 3 Show that $\triangle ABC \sim \triangle CDE$.

Since $\triangle ACB$ is a right triangle with right angle *B*, $\angle BAC$ is complementary to $\angle ACB$. It is given that $\overrightarrow{AC} \perp \overrightarrow{CE}$, so we know that $\triangle ACE$ is a right angle. By construction, $\angle BCD$ is a straight angle. So, $\angle ECD$ is complementary to $\angle ACB$. Since angles complementary to the same angle are congruent, $\angle BAC \cong \angle ECD$. Since right angles are congruent, $\angle B \cong \angle D$. Therefore, by AA Similarity, $\triangle ABC \simeq \triangle CDE$.

Since $m_1 = -\frac{AB}{BC}$ and $m_2 = \frac{DE}{CD}$, $m_1m_2 = \left(-\frac{AB}{BC}\right)\left(\frac{DE}{CD}\right)$. Since two similar polygons have proportional sides, $\frac{AB}{BC} = \frac{CD}{DE}$. Therefore, by substitution, $m_1m_2 = \left(-\frac{CD}{DE}\right)\left(\frac{DE}{CD}\right)$ or -1.

Model

- **1. PROOF** Use the diagram from Activity 1 to prove the second half of the theorem.
 - **Given:** Slope of $\overrightarrow{CE} = m_1$, slope of $\overrightarrow{AC} = m_2$, and $m_1m_2 = -1$. $\triangle ABC$ is a right triangle with right angle *B*. $\triangle CDE$ is a right triangle with right angle *D*.

Prove: $\overrightarrow{CE} \perp \overrightarrow{AC}$

You can also use similar triangles to prove statements about parallel lines.

Activity 2 Parallel Lines Given: Slope of $\overrightarrow{FG} = m_1$, slope of $\overrightarrow{JK} = m_2$, and $m_1 = m_2$. $\triangle FHG$ is a right triangle with right angle *H*. $\triangle JLK$ is a right triangle with right angle *L*. Prove: $\overrightarrow{FG} \parallel \overrightarrow{IK}$ **Step 1** On a coordinate plane, construct \overrightarrow{FG} and \overrightarrow{JK} , right $\triangle FHG$, and right $\triangle JLK$. Then draw horizontal transversal \overrightarrow{FL} , as shown. **Step 2** Find the slopes of \overrightarrow{FG} and \overrightarrow{JK} . Slope of \overrightarrow{FG} Slope of \overrightarrow{JK} $m_1 = \frac{\text{rise}}{\text{run}}$ Slope Formula $m_2 = \frac{\text{rise}}{\text{run}}$ **Slope Formula** $=\frac{GH}{HF}$ rise = GH, run = HF $=\frac{KL}{LI}$ rise = KL, run = LJ **Step 3** Show that $\triangle FHG \sim \triangle JLK$. It is given that $m_1 = m_2$. By substitution, $\frac{GH}{HF} = \frac{KL}{LJ}$. This ratio can be rewritten as $\frac{GH}{KL} = \frac{HF}{LJ}$. Since $\angle H$ and $\angle L$ are right angles, $\angle H \cong \angle L$. Therefore, by SAS similarity, $\triangle FHG \sim \triangle JLK$. **Step 4** Use the fact that $\triangle FHG \sim \triangle JLK$ to prove that $\overleftarrow{FG} \parallel \overrightarrow{JK}$. Corresponding angles in similar triangles are congruent, so $\angle GFH \cong \angle K|L$. From the definition of congruent angles, $m \angle GFH = m \angle KJL$ (or $\angle GFH \cong \angle KJL$). By definition, $\angle KJH$ and $\angle KJL$ form a linear pair. Since linear pairs are supplementary, $m\angle KJH$ + $m \angle KJL = 180$. So, by substitution, $m \angle KJH + m \angle GFH = 180$. By definition, $\angle KJH$ and $\angle GFH$ are supplementary. Since $\angle KJH$ and $\angle GFH$ are supplementary and are consecutive interior angles, $FG \parallel JK$.

Model

2. **PROOF** Use the diagram from Activity 2 to prove the following statement.

Given: Slope of $\overrightarrow{FG} = m_1$, slope of $\overrightarrow{JK} = m_2$, and $\overrightarrow{FG} \parallel \overleftarrow{JK}$.

Prove: $m_1 = m_2$

Parallel Lines and Proportional Parts

Source: Encyclopaedia Britannica

Theorem 6.6 Converse of Triangle Proportionality Theorem

If a line intersects two sides of a triangle and separates the sides into proportional corresponding segments, then the line is parallel to the third side of the triangle.

Example If
$$\frac{AE}{EB} = \frac{CD}{DB}$$
, then $\overline{AC} \parallel \overline{ED}$.

You will prove Theorem 6.6 in Exercise 31.

In $\triangle DEF$, EH = 3, HF = 9, and DG is one-third the length of \overline{GF} . Is $\overline{DE} \parallel \overline{GH}$?

Using the converse of the Triangle Proportionality Theorem, in order to show that $\overline{DE} \parallel \overline{GH}$, we must show that $\frac{DG}{GF} = \frac{EH}{HF}$.

Find and simplify each ratio. Let DG = x. Since DG is one-third of GF, GF = 3x.

$$\frac{DG}{GF} = \frac{x}{3x} \text{ or } \frac{1}{3} \qquad \qquad \frac{EH}{HF} = \frac{3}{9} \text{ or } \frac{2}{3}$$

Since $\frac{1}{3} = \frac{1}{3}$, the sides are proportional, so $\overline{DE} \parallel \overline{GH}$.

GuidedPractice

2. *DG* is half the length of \overline{GF} , EH = 6, and HF = 10. Is $\overline{DE} \parallel \overline{GH}$?

StudyTip

Midsegment Triangle The three midsegments of a triangle form the *midsegment triangle*.

A **midsegment of a triangle** is a segment with endpoints that are the midpoints of two sides of the triangle. Every triangle has three midsegments. The midsegments of $\triangle ABC$ are \overline{RP} , \overline{PQ} , \overline{RQ} .

A special case of the Triangle Proportionality Theorem is the Triangle Midsegment Theorem.

Theorem 6.7 Triangle Midsegment Theorem

A midsegment of a triangle is parallel to one side of the triangle, and its length is one half the length of that side.

Example If J and K are midpoints of \overline{FH} and \overline{HG} ,

respectively, then $\overline{JK} \parallel \overline{FG}$ and $JK = \frac{1}{2}FG$.

StudyTip

Midsegment The Triangle Midsegment Theorem is similar to the Trapezoid Midsegment Theorem, which states that the midsegment of a trapezoid is parallel to the bases and its length is one half the sum of the measures of the bases. D $\overline{\textit{EF}} \parallel \overline{\textit{AB}} \parallel \overline{\textit{DC}}$ $EF = \frac{1}{2}(AB + DC)$

Example 3 Use the Triangle Midsegment Theorem In the figure, \overline{XY} and \overline{XZ} are midsegments of $\triangle RST$. Find each measure. a. XZ 124° $XZ = \frac{1}{2} \mathbf{RT}$ **Triangle Midsegment Theorem** $XZ = \frac{1}{2}$ (13) **Substitution** XZ = 6.5Simplify **b.** *ST* $XY = \frac{1}{2}ST$ **Triangle Midsegment Theorem** $7 = \frac{1}{2}ST$ Substitution 14 = STMultiply each side by 2 c. $m \angle RYX$ By the Triangle Midsegment Theorem, $\overline{XZ} \parallel \overline{RT}$. $\angle RYX \cong \angle YXZ$ **Alternate Interior Angles Theorem** $m \angle RYX = m \angle YXZ$ **Definition of congruence** $m \angle RYX = 124$ Substitution **Guided**Practice Find each measure. **3A.** DE 92 **3B.** *DB* **3C.** *m∠FED*

ς

7

StudyTip Other Proportions Two other proportions can be written for

the example in Corollary 7.1. $\frac{AB}{EF} = \frac{BC}{FG}$ and $\frac{AC}{BC} = \frac{EG}{FG}$

Real-WorldLink

To make a two-dimensional drawing appear threedimensional, an artist provides several perceptual cues.

- size faraway items look smaller
- *clarity* closer objects appear more in focus
- detail nearby objects have texture, while distant ones are roughly outlined
 Source: Center for Media Literacy

Real-World Example 4 Use Proportional Segments of Transversals

ART Shaikha is drawing a hallway in one-point perspective. She uses the guidelines shown to draw two windows on the left wall. If segments \overline{AD} , \overline{BC} , \overline{WZ} , and \overline{XY} are all parallel, AB = 8 centimeters, DC = 9 centimeters, and ZY = 5 centimeters, find WX.

The distance between *W* and *X* should be $\frac{40}{9}$ or about 4.4 centimeters.

CHECK The ratio of *DC* to *ZY* is 9 to 5, which is about 10 to 5 or 2 to 1. The ratio of *AB* to *WX* is 8 to 4.4 or about 8 to 4 or 2 to 1 as well, so the answer is reasonable. ✓

GuidedPractice

4. REAL ESTATE *Frontage* is the measurement of a property's boundary that runs along the side of a particular feature such as a street, lake, ocean, or river. Find the ocean frontage for Lot A to the nearest tenth of a yard.

If the scale factor of the proportional segments is 1, they separate the transversals into congruent parts.

It is possible to separate a segment into two congruent parts by constructing the perpendicular bisector of a segment. However, a segment cannot be separated into three congruent parts by constructing perpendicular bisectors. To do this, you must use parallel lines and Corollary 6.2.

Solve each proportion. (Lesson 6-1)

1.
$$\frac{2}{5} = \frac{x}{25}$$

2. $\frac{10}{3} = \frac{7}{x}$
3. $\frac{y+4}{11} = \frac{y-2}{9}$
4. $\frac{z-1}{3} = \frac{8}{z+1}$

4.
$$\frac{z-1}{3} = \frac{8}{z+1}$$

5. BASEBALL A pitcher's earned run average, or ERA, is the product of 9 and the ratio of earned runs the pitcher has allowed to the number of innings pitched. During the 2007 season, Johan Santana of the Minnesota Twins allowed 81 earned runs in 219 innings pitched. Find his ERA to the nearest hundredth. (Lesson 6-1)

Each pair of polygons is similar. Find the value of x. (Lesson 6-2)

- **8. MULTIPLE CHOICE** Two similar polygons have a scale factor of 3:5. The perimeter of the larger polygon is 120 meters. Find the perimeter of the smaller polygon. (Lesson 6-2)
 - **A** 68 m **C** 192 m
 - **B** 72 m
- **D** 200 m

Determine whether the triangles are similar. If so, write a similarity statement. If not, what would be sufficient to prove the triangles similar? Explain your reasoning. (Lesson 6-3)

ALGEBRA Identify the similar triangles. Find each measure. (Lesson 6-3)

13. HISTORY In the fifteenth century, mathematicians and artists tried to construct the perfect letter. A square was used as a frame to design the letter "A," as shown below. The thickness of the major stroke of the letter was $\frac{1}{12}$ the height of the letter. (Lesson 6-4)

- a. Explain why the bar through the middle of the A is half the length of the space between the outside bottom corners of the sides of the letter.
- **b.** If the letter were 3 centimeters tall, how wide would the major stroke be?

Parts of Similar Triangles

:•Why?

 You learned that corresponding sides of similar polygons are proportional.

Then

- Recognize and use proportional relationships of corresponding angle bisectors, altitudes, and medians of similar triangles.
- **2** Use the Triangle Bisector Theorem.
- The "Rule of Thumb" uses the average ratio of a person's arm length to the distance between his or her eyes and the altitudes of similar triangles to estimate the distance between a person and an object of approximately known width.

Mathematical Practices

Make sense of problems and persevere in solving them. Construct viable arguments and critique the reasoning of others. **Special Segments of Similar Triangles** You learned in Lesson 6-2 that the corresponding side lengths of similar polygons, such as triangles, are proportional. This concept can be extended to other segments in triangles.

You will prove Theorems 6.9 and 6.10 in Exercises 18 and 19, respectively.

Real-WorldCareer

Athletic Trainer Athletic trainers help prevent and treat sports injuries. They ensure that protective equipment is used properly and that people understand safe practices that prevent injury. An athletic trainer must have a bachelor's degree to be certified. Most also have master's degrees. Refer to Exercise 29.

StudyTip

Use Scale Factor Example 1 could also have been solved by first finding the scale factor between $\triangle ABC$ and $\triangle FDG$. The ratio of the angle bisector in $\triangle ABC$ to the angle bisector in $\triangle FDG$ would then be equal to this scale factor.

You can use special segments in similar triangles to find missing measures.

Example 1 Use Special Segments in Similar Triangles In the figure, $\triangle ABC \sim \triangle FDG$. Find the value of x. A $\begin{pmatrix} & & \\ & & & \\ & & \\ &$

AP and FQ are corresponding angle bisectors and \overline{AB} and \overline{FD} are corresponding sides of similar triangles ABC and FDG.

Real-WorldLink

Hold your outstretched hand horizontal at arm's length with your palm facing you; for each hand width the sun is above the horizon, there is one remaining hour of sunlight.

Source: Sail Island Channels

Real-World Example 2 Use Similar Triangles to Solve Problems

ESTIMATING DISTANCES Khawla holds her arm straight out in front of her with her elbow straight and her thumb pointing up. Closing one eye, she aligns one edge of her thumb with a car she is sighting. Next she switches eyes without moving her head or her arm. The car appears to jump 4 car widths. If Khawla's arm is about 10 times longer than the distance between her eyes, and the car is about 5.5 feet wide, estimate the distance from Khawla's thumb to the car.

Understand Make a diagram of the situation labeling the given distances and the distance you need to find as *x*. Also, label the vertices of the triangles formed.

Check The ratio of Khawla's arm length to the width between her eyes is 10 to 1. The ratio of the distance to the car to the distance the image of the car jumped is 67.2 to 6.72 or 10 to 1. \checkmark

GuidedPractice

2. Suppose Khawla stands at the back of her classroom and sights a clock on the wall at the front of the room. If the clock is 30 centimeters wide and appears to move 3 clock widths when she switches eyes, estimate the distance from Khawla's thumb to the clock.

2 Triangle Angle Bisector Theorem An angle bisector of a triangle also divides the side opposite the angle proportionally.

Check Your Understanding

3. VISION A cat that is 10 inches tall forms a retinal image that is 7 millimeters tall. If $\triangle ABE \sim \triangle DBC$ and the distance from the pupil to the retina is 25 millimeters, how far away from your pupil is the cat?

Find the value of each variable.

12. CHALLENGE The figural pattern below represents a sequence of figural numbers called *triangular numbers*. How many dots will be in the 8th term in the sequence? Is it possible to write a formula that can be used to determine the number of dots in the *n*th triangular number in the series? If so, write the formula. If not, explain why not.

Similarity Transformations

dilation similarity transformation

center of dilation scale factor of a dilation enlargement reduction

Mathematical Practices Attend to precision. Model with mathematics.

is an operation that maps an original figure, the preimage, onto a new figure called the *image*.

A dilation is a transformation that enlarges or reduces the original figure proportionally. Since a dilation produces a similar figure, a dilation is a type of similarity transformation.

Dilations are performed with respect to a fixed point called the **center of dilation**.

The scale factor of a dilation describes the extent of the dilation. The scale factor is the ratio of a length on the image to a corresponding length on the preimage.

The letter *k* usually represents the scale factor of a dilation. The value of k determines whether the dilation is an enlargement or a reduction.

ConceptSummary Types of Dilations

A dilation with a scale factor greater than 1 produces an enlargement, or an image that is larger than the original figure.

- **Symbols** If k > 1, the dilation is an enlargement.
- **Example** \triangle *FGH* is dilated by a scale factor of 3 to produce $\triangle RST$. Since 3 > 1, $\triangle RST$ is an enlargement of $\triangle FGH$.

A dilation with a scale factor between 0 and 1 produces a **reduction**, an image that is smaller than the original figure.

Symbols If 0 < k < 1, the dilation is a reduction.

Example ABCD is dilated by a scale factor of
$$\frac{1}{4}$$
 to produce WXYZ. Since $0 < \frac{1}{4} < 1$, WXYZ is a reduction of ABCD.

õ

 $\triangle JKL$ is a dilation of $\triangle ABC$. Center of dilation: (0, 0) Scale factor: $\frac{JK}{AB}$

Copyright © McGraw-Hill Education

StudyTip

Multiple Representations The scale factor of a dilation can be represented as a fraction, a decimal, or as a percent. For example, a scale factor of $\frac{2}{5}$ can also be written as 0.4 or as 40%.

Example 1 Identify a Dilation and Find Its Scale Factor

Determine whether the dilation from *A* to *B* is an *enlargement* or a *reduction*. Then find the scale factor of the dilation.

Dilations and their scale factors are used in many real-world situations.

Real-World Example 2 Find and Use a Scale Factor

Real-WorldLink

Hew Weng Fatt accepted a contest challenge to collect the most movie stubs from a certain popular fantasy movie. He collected 6561 movie stubs in 38 days! **Source:** *Youth2, Star Publications* **COLLECTING** Refer to the beginning of the lesson. By what percent should Sally enlarge the ticket stub so that the dimensions of its image are 3 times that of her original? What will be the dimensions of the enlarged image?

Sally wants to create a dilated image of her ticket stub using the copier. The scale factor of her enlargement is 3. Written as a percent, the scale factor is $(3 \cdot 100)\%$ or 300%. Now find the dimension of the enlarged image using the scale factor.

width: 5 cm 300% = 15 cm

length: 6.4 cm 300% = 19.2 cm

The enlarged ticket stub image will be 15 centimeters by 19.2 centimeters.

GuidedPractice

2. If the resulting ticket stub image was 1.5 centimeters wide by about 1.9 centimeters long instead, what percent did Sally mistakenly use to dilate the original image? Explain your reasoning.

Verify Similarity You can verify that a dilation produces a similar figure by comparing corresponding sides and angles. For triangles, you can also use SAS Similarity.

Example 3 Verify Similarity after a Dilation

Graph the original figure and its dilated image. Then verify that the dilation is a similarity transformation.

a. original: A(-6, -3), B(3, 3), C(3, -3); image: X(-4, -2), Y(2, 2), Z(2, -2)

Graph each figure. Since $\angle C$ and $\angle Z$ are both right angles, $\angle C \cong \angle Z$. Show that the lengths of the sides that include $\angle C$ and $\angle Z$ are proportional.

Use the coordinate grid to find the side lengths.

 $\frac{XZ}{AC} = \frac{6}{9}$ or $\frac{2}{3}$, and $\frac{YZ}{BC} = \frac{4}{6}$ or $\frac{2}{3}$, so $\frac{XZ}{AC} = \frac{YZ}{BC}$

Since the lengths of the sides that include $\angle C$ and $\angle Z$ are proportional, $\triangle XYZ \sim \triangle ABC$ by SAS Similarity.

b. original: J(-6, 4), K(6, 8), L(8, 2), M(-4, -2); image: P(-3, 2), Q(3, 4), R(4, 1), S(-2, -1)

Use the Distance Formula to find the length of each side.

$$K = \sqrt{[6 - (-6)]^2 + (8 - 4)^2} = \sqrt{160} \text{ or } 4\sqrt{10}$$

$$PQ = \sqrt{[3 - (-3)]^2 + (4 - 2)^2} = \sqrt{40} \text{ or } 2\sqrt{10}$$

$$KL = \sqrt{(8 - 6)^2 + (2 - 8)^2} = \sqrt{40} \text{ or } 2\sqrt{10}$$

$$QR = \sqrt{(4 - 3)^2 + (1 - 4)^2} = \sqrt{10}$$

$$LM = \sqrt{(-4 - 8)^2 + (-2 - 2)^2} = \sqrt{160} \text{ or } 4\sqrt{10}$$

$$RS = \sqrt{(-2 - 4)^2 + (-1 - 1)^2} = \sqrt{40} \text{ or } 2\sqrt{10}$$

$$MJ = \sqrt{[-6 - (-4)]^2 + [4 - (-2)]^2} = \sqrt{40} \text{ or } 2\sqrt{10}$$

$$SP = \sqrt{[-3 - (-2)]^2 + [2 - (-1)]^2} = \sqrt{10}$$
Find and compare the ratios of corresponding sides.

$$\frac{PQ}{JK} = \frac{2\sqrt{10}}{4\sqrt{10}} \text{ or } \frac{1}{2} \qquad \frac{QR}{KL} = \frac{\sqrt{10}}{2\sqrt{10}} \text{ or } \frac{1}{2} \qquad \frac{RS}{LM} = \frac{2\sqrt{10}}{4\sqrt{10}} \text{ or } \frac{1}{2} \qquad \frac{SP}{MJ} = \frac{\sqrt{10}}{2\sqrt{10}} \text{ or } \frac{1}{2}$$

PQRS and JKLM are both rectangles. This can be proved by showing that diagonals $\overline{PR} \cong \overline{SQ}$ and $\overline{JL} \cong \overline{KM}$ are congruent using the Distance Formula. Since they are both rectangles, their corresponding angles are congruent.

Since
$$\frac{PQ}{JK} = \frac{QR}{KL} = \frac{RS}{LM} = \frac{SP}{MJ}$$
 and corresponding angles are congruent, $PQRS \sim JKLM$.

GuidedPractice

Scale Drawings and Models

··Why? Then · Now You used scale Interpret scale In Saint-Luc, Switzerland, Le Chemin des planetes, factors to solve models. has constructed a scale model of each planet in the solar system. It is one of the largest complete problems with similar Use scale factors to polygons. three-dimensional scale models of the solar solve problems. system. The diameter of the center of the model of Saturn shown is 121 millimeters; the diameter of the real planet is about 121,000 kilometers. **NewVocabulary** Scale Models A scale model or a scale drawing is an object or drawing with lengths

scale model scale drawing scale

Mathematical Practices

Model with mathematics.

Look for and make use of

structure

proportional to the object it represents. The scale of a model or drawing is the ratio of a length on the model or drawing to the actual length of the object being modeled or drawn.

Example 1 Use a Scale Drawing

MAPS The scale on the map shown is 1 centimeter : 64.4 kilometers. Find the actual distance from Nashville to Memphis.

Use a ruler. The distance between Nashville and Memphis is about 3.8 centimeters. 1 cm = 64.4 kmMilan Nashvill TENNESSEE 40 Murfre sborc Savannah 65 Chattan Memphis

Method 1 Write and solve a proportion.

Let *x* represent the distance between Nashville and Memphis.

Scale Nashville to Memphis 1 cm map $\frac{1.4 \text{ km}}{1 \cdot x} = \frac{x \text{ km}}{4.4 \cdot 3.8}$ actual ►64.4 km actual Cross Products Property x = 241.4Simplify.

Method 2 Write and solve an equation.

Let a = actual distance in kilometers between Nashville and Memphis and m = map distance in centimeter. Write the scale as $\frac{64.4 \text{ km}}{1 \text{ cm}}$, which is $64.4 \div 1 \text{ or } 64.4 \text{ kilometers per centimeter.}$ So for every centimeter on the map, the actual distance is 64.4 kilometer.

$$a = 64.4 \cdot m$$
Write an equation. $= 64.4 \cdot 3.8$ $m = 3.8 \text{ cm}$ $= 241.4$ Solve.CHECK Use dimensional analysis.

 $mi = \frac{km}{cm} \cdot cm \Longrightarrow km = km \checkmark$

The distance between Nashville and Memphis is 241.4 kilometers.

GuidedPractice

1. MAPS Find the actual distance between Nashville and Chattanooga.

Use Scale Factors The scale factor of a drawing or scale model is written as a unitless ratio in simplest form. Scale factors are always written so that the model length in the ratio comes first.

Example 2 Find the Scale

SCALE MODEL This is a miniature replica of a 1923 Checker Cab. The length of the model is 16.5 centimeters. The actual length of the car is 4 meters.

a. What is the scale of the model?

To find the scale, write the ratio of a model length to an actual length.

 $\frac{\text{model length}}{\text{actual length}} = \frac{16.5 \text{ cm}}{4 \text{ m}} \text{ or } \frac{1 \text{ cm}}{0.24 \text{ m}}$

The scale of the model is 1 cm : 0.24 m

b. How many times as long as the actual car is the model?

To answer this question, find the scale factor of the model. Multiply by a conversion factor that relates centimeter to meters to obtain a unitless ratio.

 $\frac{1 \text{ cm}}{0.24 \text{ m}} = \frac{1 \text{ cm}}{0.24 \text{ m}} \cdot \frac{1 \text{ m}}{100 \text{ cm}} = \frac{1}{24}$

The scale factor is 1 : 50. That is, the model is $\frac{1}{24}$ as long as the actual car.

GuidedPractice

- 2. SCALE MODEL Mr. Saeed's history class made a scale model of the Alamo that is 3 feet tall. The actual height of the building is 33 feet 6 inches.
 - **A.** What is the scale of the model?
 - **B.** How many times as tall as the actual building is the model? How many times as tall as the model is the actual building?

Write an equation.

SCALE MODEL Suppose you want to build a model of the St. Louis Gateway Arch that is no more than 28 centimeters tall. Choose an appropriate scale and use it to determine the height of the model. Use the information at the left.

The actual monument is 192 meters tall. Since 192 meters \div 28 centimeters = 6.86 meters per centimeter, a scale of 1 centimeter = 7 meters is an appropriate scale. So, for every centimeter on the model m, let the actual measure a be 7 meters. Write this as an equation.

$$a = 7 \cdot m$$
Write an equat $192 = 7 \cdot m$ $a = 630$

27.4 = m

So the height of the model would be 27.4 centimeters.

GuidedPractice

3. SCALE DRAWING Fatheya is making a scale drawing of her room on an 8.5-by-11-cm sheet of paper. If her room is 14 meters by 12 meters, find an appropriate scale for the drawing and determine the dimensions of the drawing.

StudyTip

Regularity The scale factor of a model that is smaller than the original object is between 0 and 1 and the scale factor for a model that is larger than the original object is greater than 1.

direction during high winds.

Check Your Understanding

- **Example 1** MAPS Use the map of Maine shown and a customary ruler to find the actual distance between each pair of cities. Measure to the nearest sixteenth of an inch.
 - 1. Bangor and Portland
 - 2. Augusta and Houlton
- Example 2 3. SCALE MODELS Zayed made a scale model of a local bridge. The model spans 6 inches; the actual bridge spans 50 feet.
 - a. What is the scale of the model?
 - b. What scale factor did Zayed use to build his model?

Example 3 4. SPORTS A volleyball court is 9 meters wide and 18 meters long. Choose an appropriate scale and construct a scale drawing of the court to fit on a 7.62-centimeter by 12.7-centimeter index card.

Practice and Problem Solving

Example 1 MODELING Use the map of Oklahoma shown and a metric ruler to find the actual distance between each pair of cities. Measure to the nearest tenth of a centimeter.

5. Guymon and Oklahoma City

7. Enid and Tulsa

8. Ponca City and Shawnee

Example 2

9 SCULPTURE A replica of a famous sculpture is 10 inches tall. The original sculpture is 10 feet tall.

- **a.** What is the scale of the replica?
- **b.** How many times as tall as the actual sculpture is the replica?

10. MAPS The map below shows a portion of Frankfort, Kentucky.

- **a.** If the actual distance from the intersection of Conway Street and 4th Street to the intersection of Murray Street and 4th Street is 0.47 mile, use a customary ruler to estimate the scale of the map.
- b. What is the approximate scale factor of the map? Interpret its meaning.

Example 3 SPORTS Choose an appropriate scale and construct a scale drawing of each playing area so that it would fit on an 8.5-by-11-inch sheet of paper.

- **11.** A baseball diamond is a square 90 feet on each side with about a 128-foot diagonal.
- 12. A high school basketball court is a rectangle with length 84 feet and width 50 feet.

MODELING Use the map shown and an inch ruler to answer each question. Measure to the nearest sixteenth of an inch and assume that you can travel along any straight line.

- **13.** About how long would it take to drive from Valdosta, Georgia, to Daytona Beach, Florida, traveling at 65 miles per hour?
- **14.** How long would it take to drive from Gainesville to Miami, Florida, traveling at 70 miles per hour?

- **15. SCALE MODELS** If the distance between Earth and the Sun is actually 150,000,000 kilometers, how far apart are Earth and the Sun when using the 1:93,000,000 scale model?
- **16. LITERATURE** In the book, *Alice's Adventures in Wonderland*, Alice's size changes from her normal height of about 50 inches. Suppose Alice came across a door about 15 inches high and her height changed to 10 inches.
 - a. Find the ratio of the height of the door to Alice's height in Wonderland.
 - **b.** How tall would the door have been in Alice's normal world?

17 ROCKETS Tarek bought a $\frac{1 \text{ in.}}{12 \text{ ft}}$ scale model of the Mercury-Redstone rocket.

- **a.** If the height of the model is inches, what is the approximate height of the rocket?
- **b.** If the diameter of the rocket is 70 inches, what is the diameter of the model? Round to the nearest half inch.

- **18. ARCHITECTURE** A replica of a famous statue is 16.75 feet tall. If the scale factor of the replica to the actual statue is 1:9, how tall is the actual statue?
- **19 AMUSEMENT PARK** The Eiffel Tower in Paris, France, is 986 feet tall, not including its antenna. A replica of the Eiffel Tower was built as a ride in an amusement park. If the scale factor of the replica to the actual tower is approximately 1:3, how tall is the ride?
- **20.** Solution 20. Solution 20.
 - **a. Geometric** Draw right $\triangle ABC$ with the right angle at vertex *B*. Draw altitude \overline{BD} . Draw right $\triangle MNP$, with right angle *N* and altitude \overline{NQ} , and right $\triangle WXY$, with right angle *X* and altitude \overline{XZ} .
 - **b. Tabular** Measure and record indicated angles in the table below.

			Angle I	Measure			
		ABC	$\triangle E$	BDC		4DB	
A 400	ABC	a4	BDC	ΙΟΥ	ADB	-5	
ZABC	A	12	CBD	CO.	BAD	- 9.	
	C U		DCB		DBA		
	۸۵	INP •	△NQP		$\triangle MQN$		
	MNP		NQP		MQN		
	М		PNQ		NMQ		
	Р		QPN		QNM		
		VXY		VZX		XZY	
A 11007	WXY		WZX		XZY		
	W		XWZ		YXZ		
	Y		ZXW		ZYX		

c. Verbal Make a conjecture about the altitude of a right triangle originating at the right angle of the triangle.

H.O.T. Problems Use Higher-Order Thinking Skills

- **21. ERROR ANALYSIS** Abdulaziz and Tarek are building a replica of their high school. The high school is 75 feet tall and the replica is 1.5 feet tall. Abdulaziz says the scale factor of the actual high school to the replica is 50:1, while Tarek says the scale factor is 1:50. Is either of them correct? Explain your reasoning.
- **22. CHALLENGE** You can produce a scale model of a certain object by extending each dimension by a constant. What must be true of the shape of the object? Explain your reasoning.
- **23. SENSE-MAKING** Muna is making two scale drawings of the lunchroom. In the first drawing, Muna used a scale of 1 inch = 1 foot, and in the second drawing she used a scale of 1 inch = 6 feet. Which scale will produce a larger drawing? What is the scale factor of the first drawing to the second drawing? Explain.
- **24. OPEN ENDED** Draw a scale model of your classroom using any scale.
- 25. WRITING IN MATH Compare and contrast scale and scale factor.

49. $\sqrt{33 \cdot 21}$

Study Guide

KeyConcepts

Proportions (Lesson 6-1)

• For any numbers *a* and *c* and any nonzero numbers *b* and $d, \frac{a}{b} = \frac{c}{d}$ if and only if ad = bc.

Similar Polygons and Triangles (Lessons 6-2 and 6-3)

- Two polygons are similar if and only if their corresponding angles are congruent and the measures of their corresponding sides are proportional.
- Two triangles are similar if:

AA: Two angles of one triangle are congruent to two angles of the other triangle.

SSS: The measures of the corresponding sides of the two triangles are proportional.

SAS: The measures of two sides of one triangle are proportional to the measures of two corresponding sides of another triangle and their included angles are congruent.

Proportional Parts (Lessons 6-4 and 6-5)

- If a line is parallel to one side of a triangle and intersects the other two sides in two distinct points, then it separates these sides into segments of proportional length.
- A midsegment of a triangle is parallel to one side of the triangle and its length is one-half the length of that side.
- Two triangles are similar when each of the following are proportional in measure: their perimeters, their corresponding altitudes, their corresponding angle bisectors, and their corresponding medians.

Similarity Transformations and Scale Drawings and Models (Lessons 6-6 and 6-7)

• A scale model or scale drawing has lengths that are proportional to the corresponding lengths in the object it represents.

Lesson-by-Lesson Review

Ratios and Proportions

Solve each proportion.

- **11.** $\frac{x}{12} = \frac{50}{6x}$
- **9.** $\frac{x+8}{6} = \frac{2x-3}{10}$ **10.** $\frac{3x+9}{x} = \frac{12}{5}$ **11.** $\frac{x}{12} = \frac{50}{6x}$ **12.** $\frac{7}{x} = \frac{14}{9}$
- **13.** The ratio of the lengths of the three sides of a triangle is 5:8:10. If its perimeter is 276 inches, find the length of the longest side of the triangle.
- 14. CARPENTRY A board that is 12 feet long must be cut into two pieces that have lengths in a ratio of 3 to 2. Find the lengths of the two pieces.

Example 1	
Solve $\frac{2x-3}{4} = \frac{x+9}{3}$.	
$\frac{2x-3}{4} = \frac{x+9}{3}$	Original proportion
3(2x-3) = 4(x+9)	Cross Products Property
6x - 9 = 4x + 36	Simplify.
2x - 9 = 36	Subtract.
2x = 45	Add 9 to each side.
<i>x</i> = 22.5	Divide each side by 2.

Similar Polygons 6-

Determine whether each pair of figures is similar. If so, write the similarity statement and scale factor. If not, explain your reasoning.

17. The two triangles in the figure below are similar. Find the value of x.

18. PHOTOS If the dimensions of a photo are 2 centimeters by 3 centimeters and the dimensions of a poster are 8 centimeters by 12 centimeters, are the photo and poster similar? Explain.

Example 2

Determine whether the pair of triangles is similar. If so, write the similarity statement and scale factor. If not, explain your reasoning.

 $\angle A \cong \angle X$ and $\angle C \cong \angle Z$, so by the Third Angle Theorem, $\angle B \cong \angle Y$. All of the corresponding angles are therefore congruent.

Similar polygons must also have proportional side lengths. Check the ratios of corresponding side lengths.

$$\frac{AB}{XY} = \frac{20}{15} \text{ or } \frac{4}{3} \qquad \frac{BC}{YZ} = \frac{24}{18} \text{ or } \frac{4}{3} \qquad \frac{AC}{XZ} = \frac{38}{28.5} \text{ or } \frac{4}{3}$$

Since corresponding sides are proportional, $\triangle ABC \sim \triangle XYZ$. So, the triangles are similar with a scale factor of $\frac{4}{3}$.

Samples Similar Triangles

23. TREES To estimate the height of a tree, Mazen stands in the shadow of the tree so that his shadow and the tree's shadow end at the same point. Mazen is 6 feet 4 inches tall and his shadow is 15 feet long. If he is standing 66 feet away from the tree, what is the height of the tree?

Example 3

Determine whether the triangles are similar. If so, write a similarity statement. Explain your reasoning.

 $\angle WZX \cong \angle XZY$ because they are both right angles. Now compare the ratios of the legs of the right triangles.

WZ _	9	3	XZ _	12	_	3
XZ -	12	4	YZ -	16	_	4

Since two pairs of sides are proportional with the included angles congruent, $\triangle WZX \sim \triangle XZY$ by SAS Similarity.

6_5 Parts of Similar Triangles

Find the value of each variable. 27. $\sqrt[6]{x}$ 13.5 28. $\sqrt[3]{4}$ 9 10

29. MAPS The scale given on a map indicates that 3 centimeters represents 50 kilometers. Cities A, B and C form a triangle. If the measurements of the lengths of the sides of this triangle on the map are 15 centimeters, 10 centimeters, and 13 centimeters, find the perimeter of the actual triangle formed by these cities to the nearest kilometer.

Use the Triangle Angle Bisector Theorem to write a proportion.

$\frac{WX}{YW} = \frac{XZ}{YZ}$	Triangle Angle Bisector Thm.
$\frac{x}{28-x} = \frac{12}{14}$	Substitution
$(12) = x \cdot 14$	Cross Products Property
336 - 12x = 14x	Simplify.
336 = 26x	Add.
12.9 = <i>x</i>	Simplify.

6-6 Similarity Transformations

Determine whether the dilation from *A* to *B* is an *enlargement* or a *reduction*. Then find the scale factor of the dilation.

31.

32. GRAPHIC DESIGN Wafa wants to use a photocopier to enlarge her design for the Honors Program at her school. She sets the copier to 250%. If the original drawing was 6 inches by 9 inches, find the dimensions of the enlargement.

Example 6

(

Determine whether the dilation from *A* to *B* is an *enlargement* or a *reduction*. Then find the scale factor of the dilation.

B is larger than *A*, so the dilation is an enlargement. The distance between the vertices at (-4, 0) and (2, 0) for *A* is 6 and the distance between the vertices at (-6, 0) and (3, 0) for *B* is 9. So the scale factor is $\frac{9}{6}$ or $\frac{3}{2}$.

Study Guide and Review Continued

7 Scale Drawings and Models

- **33. BUILDING PLANS** In a scale drawing of a school's floor plan, 6 inches represents 100 feet. If the distance from one end of the main hallway to the other is 175 feet, find the corresponding length in the scale drawing.
- **34. MODEL TRAINS** A popular scale for model trains is the 1:48 scale. If the actual train had a length of 72 feet, find the corresponding length of the model in inches.
- **35.** MAPS A map has a scale where 3 centimeters = 25 kilometers. If the distance on the map between Point A and Point B, is 11.5 centimeters what is the actual distance between the cities?

Example 7

In the scale of a map 1 centimeter = 20 kilometers. The distance on the map between Point A and Point B, is 8.75 centimeters. Find the distance between the two cities.

$$\frac{1}{20} = \frac{8.75}{x}$$
Write a proportion.
 $x = 20(8.75)$
Cross Products Property
 $x = 175$
Simplify.

The distance between the two cities is 175 kilometers.

برنامج محمد بن راشــد **للتعــلـم الذكـــيم** Mohammed Bin Rashid Smart Learning Program

Solve each proportion.

1.
$$\frac{3}{7} = \frac{12}{x}$$

2. $\frac{2x}{5} = \frac{x+3}{3}$
3. $\frac{4x}{15} = \frac{60}{x}$
4. $\frac{5x-4}{4x+7} = \frac{13}{11}$

Determine whether each pair of figures is similar. If so, write the similarity statement and scale factor. If not, explain your reasoning.

7. CURRENCY Adnan is traveling to Europe this summer with the French Club. He plans to bring AED 1,100 to spend while he is there. If AED 260.32 is equivalent to 63 euros, how many euros will he receive when he exchanges his money?

ALGEBRA Find *x* and *y*. Round to the nearest tenth if necessary.

- **10. ALGEBRA** Equilateral $\triangle MNP$ has perimeter 12a + 18b. \overline{QR} is a midsegment. What is QR?
- **11. ALGEBRA** Right isosceles $\triangle ABC$ has hypotenuse length *h*. \overline{DE} is a midsegment with length 4x that is not parallel to the hypotenuse. What is the perimeter of $\triangle ABC$?

12. SHORT RESPONSE Eissa has a diecast metal car that is a scale model of an actual race car. If the actual length of the car is 10 feet and 6 inches and the model has a length of 7 inches, what is the scale factor of model to actual car?

Determine whether the dilation from *A* to *B* is an *enlargement* or a *reduction*. Then find the scale factor of the dilation.

Identifying Nonexamples

Multiple choice items sometimes ask you to determine which of the given answer choices is a nonexample. These types of problems require a different approach when solving them.

Strategies for Identifying Nonexamples

Step 1

Read and understand the problem statement.

- Nonexample: A nonexample is an answer choice that does not satisfy the conditions of the problem statement.
- Keywords: Look for the word *not* (usually bold, all capital letters, or italicized) to indicate that you need to find a nonexample.

Step 2

Follow the concepts and steps below to help you identify nonexamples. Identify any answer choices that are clearly incorrect and eliminate them.

- Eliminate any answer choices that are not in the proper format.
- Eliminate any answer choices that do not have the correct units.

Standardized Test Example

Read the problem. Identify what you need to know. Then use the information in the problem to solve.

In the adjacent triangle, you know that $\angle MQN \cong \angle RQS$. Which of the following would *not* be sufficient to prove that $\triangle QMN \sim \triangle QRS$?

$$\mathbf{A} \ \angle QMN \cong \angle QRS$$

B
$$\overline{MN} \parallel \overline{RS}$$

$$\mathbf{C} \ \overline{QN} \cong \overline{NS}$$

$$\mathbf{D} \; \frac{QM}{QR} = \frac{QN}{QS}$$

/ohammed Bin Rashid Smart Learning Program The italicized *not* indicates that you need to find a nonexample. Test each answer choice using the principles of triangle similarity to see which one would not prove $\triangle QMN \cong \triangle QRS$.

Choice A: $\angle QMN \cong \angle QRS$

If $\angle QMN \cong \angle QRS$, then $\triangle QMN \sim \triangle QRS$ by AA Similarity.

Choice B: $\overline{MN} \parallel \overline{RS}$

If $\overline{MN} \parallel \overline{RS}$, then $\angle QMN \cong \angle QRS$, because they are corresponding angles of two parallel lines cut by transversal \overline{QR} . Therefore, $\triangle QMN \sim \triangle QRS$ by AA Similarity.

Choice C: $\overline{QN} \cong \overline{NS}$

If $\overline{QN} \cong \overline{NS}$, we cannot conclude that $\triangle QMN \sim \triangle QRS$ because we do not know anything about \overline{QM} and \overline{MR} . So, answer choice C is a nonexample.

The correct answer is C. You should also check answer choice D to make sure it is a valid example if you have time.

Exercises

Read each problem. Identify what you need to know. Then use the information in the problem to solve.

1. The ratio of the measures of the angles of the quadrilateral below is 6:5:4:3. Which of the following is *not* an angle measure of the figure?

2. Which figure can serve as a counterexample to the conjecture below?

If all angles of a quadrilateral are right angles, then the quadrilateral is a square.

- F parallelogram
- G rectangle
- H rhombus
- J trapezoid

3. Consider the figure below. Which of the following is *not* sufficient to prove that $\triangle GIK \sim \triangle HIG$?

- $\mathbf{A} \quad \angle GKI \cong \angle HGI$
- $\mathbf{B} \quad \frac{HI}{GI} = \frac{GI}{IK}$
- $\mathbf{C} \quad \frac{GH}{GI} = \frac{GK}{IK}$
- **D** $\angle IGK \cong \angle IHG$
- 4. Which triangles are *not* necessarily similar?
 - **F** two right triangles with one angle measuring 30°
 - G two right triangles with one angle measuring 45°
 - H two isosceles triangles
 - J two equilateral triangles

Standardized Test Practice

Cumulative

Multiple Choice

Read each question. Then fill in the correct answer on the answer document provided by your teacher or on a sheet of paper.

1. Faleh wants to measure the width of a ravine. He marks distances as shown in the diagram.

Using this information, what is the *approximate* width of the ravine?

Α	5 ft	С	7 ft
B	6 ft	D	8 ft

- Mahmoud and his family are planning a vacation in Cancun, Mexico. Mahmoud wants to convert AED 734.62 to Mexican pesos for spending money. If 278 Mexican pesos are equivalent to AED 91.83, how many pesos will Mahmoud get for AED 734.62?
 - **F** 2,178 **H** 2,396
 - G 2,224 J 2,504
- **3.** Which of the following terms *best* describes the transformation below?

Test-TakingTip

Question 2 Set up and solve the proportion for the number of pesos. Use the ratio pesos: dirhams.

4. Refer to the figures below. Which of the following terms *best* describes the transformation?

- H reduction
- J scale
- **5.** The ratio of North Carolina residents to Americans is about 295 to 10,000. If there are approximately 300,000,000 Americans, how many of them are North Carolina residents?
 - A 7,950,000
 - **B** 8,400,000
 - **C** 8,850,000
 - **D** 9,125,000

6. Solve for *x*.

- **7.** Two similar trapezoids have a scale factor of 3:2. The perimeter of the larger trapezoid is 21 meters. What is the perimeter of the smaller trapezoid?
 - **A** 14 m
 - **B** 17.5 m
 - **C** 28 m
 - **D** 31.5 m

Short Response/Gridded Response

Record your answers on the answer sheet provided by your teacher or on a sheet of paper.

- **8. GRIDDED RESPONSE** Moza surveyed 50 students in her school and found that 35 of them have homework at least four nights a week. If there are 290 students in the school altogether, how many of them would you expect to have homework at least four nights a week?
- **9. GRIDDED RESPONSE** In the triangle below, $\overline{MN} \parallel \overline{BC}$. Solve for *x*.

10. Quadrilateral *WXYZ* is a rhombus. If $m \angle XYZ = 110^\circ$, find $m \angle ZWY$.

11. What is the contrapositive of the statement below?

12. GRIDDED RESPONSE In the triangle below, \overline{RS} bisects $\angle VRU$. Solve for *x*.

- **13. GRIDDED RESPONSE** The scale of a map is 1 centimeter = 2.5 kilometers. What is the distance between two cities that are 3.3 centimeters apart on the map? Round to the nearest tenth, if necessary.
- **14.** What is the value of *x* in the figure?

Extended Response

Record your answers on a sheet of paper. Show your work.

15. Refer to triangle *XYZ* to answer each question.

- a. Suppose QR || XY. What do you know about the relationship between segments XQ, QZ, YR, and RZ?
- **b.** If $\overline{QR} \parallel \overline{XY}$, XQ = 15, QZ = 12, and YR = 20, what is the length of \overline{RZ} ?
- **c.** Suppose $\overline{QR} \parallel \overline{XY}, \overline{XQ} \cong \overline{QZ}$, and QR = 9.5 units. What is the length of \overline{XY} ?
